Practical No 04

A) Design a Student Registration Form using the following ASP.NET controls:

i. Label and TextBox to accept Student Name
ii. RadioButton to select Gender (Male/Female)
iii. DropDownList to select Course (BSc IT, BSc CS, BCA)
iv. CheckBox for accepting Terms & Conditions
v. Calendar control to select Date
vi. Button control to submit the form
vii. Label control to display the output.

Project Name: StudentRegistration

Project Type: ASP.NET Web Application

Program Code:

I.Filename: StudentForm.aspx.cs

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;

namespace StudentRegistration
{
    public partial class StudentForm : System.Web.UI.Page
    {
        protected void Page_Load(object sender, EventArgs e)
        {

        }

        protected void btnSubmit_Click(object sender, EventArgs e)
        {
            string gender = "";

            if(rbMale.Checked)
            {
                gender = "Male";
            }
            else if(rbFemale.Checked)
            {
                gender = "Female";
            }

            if (chkTerms.Checked)
            {
                lblOutput.Text = "StudentName :" + txtName.Text +
                    "<br/>Gender :" + gender+
                    "<br/>Course :" + ddlCourse.SelectedValue +
                    "<br/>Date :" + calDate.SelectedDate.ToShortDateString();
            }
            else
            {
                lblOutput.Text = "Please accept Terms & Condition";
            }
        }
    }
}
```

B) Create a Registration form to demonstrate use of various Validation controls.

Project Name: RegistrationForm

Project Type: ASP.NET Web Application

Program Code:

I. Filename:Registration.aspx.cs

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;

namespace RegistrationForm
{
    public partial class Registration : System.Web.UI.Page
    {
        protected void Page_Load(object sender, EventArgs e)
        {
        }

        protected void btnSubmit_Click(object sender, EventArgs e)
        {
            if (Page.IsValid)
            {
                lblOutput.Text = "Registration Sucessful";
            }
        }
    }
}
```

C) Create Web Form to demonstrate use of Adrotator Control.

Project Name: AdrotatorDemo

Project Type: ASP.NET Web Application

Program Code:

I.Filename: Ads.xml

```
<?xml version="1.0" encoding="utf-8"?>
<Advertisements>
    <Ad>
        <ImageUrl>Images/p2.jpg</ImageUrl>
        <NavigateUrl>https://www.dell.com</NavigateUrl>
        <AlternateText>Dell Laptop</AlternateText>
        <Impressions>50</Impressions>
        <Keyword>Laptop</Keyword>
    </Ad>
</Advertisements>
```

II.Filename:AdrotatorDemo.aspx

```
<%@ Page Language="C#" AutoEventWireup="true"
   CodeBehind="AdrotatorDemo.aspx.cs"
   Inherits="Adrotator.AdrotatorDemo" %>

<!DOCTYPE html>

<html xmlns="http://w3.org">
<head runat="server">
    <title>AdRotator Control Demo</title>
</head>

<body>
    <form id="form1" runat="server">
        <div>
            <br />

            <asp:AdRotator
                ID="AdRotator1"
                runat="server"
                Height="300px"
                Width="300px"
                AdvertisementFile="~/Ads.xml" />

            <br />
            <br />
            <br />
        </div>
    </form>
</body>
</html>
```
